EXPERIMENT ON POCKET CAPTURE USING WIRESHARK

AIM: To filter, capture, and view packets in coire shark tool. Capture 100 packets from the Ethernet IEEE 802.3 LAN interface and save them.

PROCEDURE:

1. Select Local Area Connection in Wireshark.
2. Go to Capture → options.
3. Select stop capture automatically after 100 packets.
4. Then click start capture.
5. Save the packets.

1) Create a filter to display only TCP, UDP packets.

PROCEDURE:

1. Select Local Area Network Connection in Wireshark.
2. Go to Capture → options.
3. Select stop capture after 100 packets.
4. then start capture.
5. To see the flow graph statistics → flow graph.

RESULT: Thus, the packets were successfully captured, filtered, viewed and analyzed using wireshark.
